PROFESSIONAL SUMMARY

Software Development Engineer with 4+ years of experience owning the design and delivery of full stack products, enterprise platforms and cloud native services. Strong in React.js, Next.js, TypeScript and Node.js, with hands on experience in solution architecture, API engineering, microservices, application security and production operations. Built production grade applications across wealth technology, BFSI and video-commerce SaaS. 3x IBM-certified in Generative AI, with hands on project experience in LLM and RAG applications .

TECHNICAL SKILLS

Languages - JavaScript, TypeScript, Python, Swift, SQL
Frontend - React.js, React Native, Next.js, Solid.js,Tailwind CSS, Redux, Responsive design
Backend - Node.js, NestJS, Express.js, REST APIs, Microservices, RabbitMQ, NGINX
Database - PostgreSQL, MySQL, Snowflake, Clickhouse, MongoDB, Redis, ORM (TypeORM, Sequelize)
AI - LLMs, Multimodal RAG, LangGraph, Langchain, Embeddings, Vector Search, Prompt Engineering, PyTorch, Hugging Face
Cloud - AWS (EC2, S3, Cognito, SES, RDS, Lambda), Azure (AI Foundry, Video Indexer, AI Search, Cosmos DB, AI Landing Zones)
Engineering - Git, Docker, UI/UX, (Figma), Unit testing (Playwright)

DOMAIN EXPERIENCE

Wealth Management & BFSI: AIF, PMS, Mutual Funds, RTA Integrations, AUM Billing, Investor Reports
Product Experience: B2B SaaS, Video Commerce, CMS, Livestreaming/VOD, RBAC Admin Portals, Headless CMS

PROFESSIONAL EXPERIENCE

360 ONE | Software Development Engineer — May 2025 - Present

- **Led the end to end engineering** of **India's first-ever AIF Channel Partner Portal**, from business requirement gathering and solution architecture to full-stack development and production launch. Built an internet-facing platform for AIF distributors across India, contributing to a **40% reduction** in **distributor-related support tickets.**
- **Increased efficiency** in fetching client's statements/reports and developed capabilities for **broker self-registration, onboarding, document management** and **real-time notifications**, reducing manual dependencies on support teams and streamlining channel partner operations.
- Independently developed an **automated data-ingestion workflow** for reports received from RTAs (Registrar & Transfer Agent) such as CAMS and KFINTECH, including drawdowns, brokerage reports. Enabled the servicing team to upload source files, trigger **report specific business rules** and processing, and automatically segregate and **publish** the **processed data** to the respective distributors through the portal, hence **reducing manual processing time and servicing effort** by **95%**.
- Led the **modernisation** of a **legacy enterprise application**, **consolidating its architecture** from **5 microservices to 3 to simplify operations** and improve maintainability. Owned the development of the **core billing module** and critical business workflows, delivering architectural changes that generated **approximately ₹2 lakh in monthly infrastructure savings** (**₹24 lakh annually**).
- Designed and developed a public-facing Reports Hub integrated with the corporate website, **enabling secure distribution** of **confidential financial reports**. Implemented **custom verification-bound access controls** and request-integrity validation to protect broker and folio specific report access without conventional login.
- Owned **delivery** across **multiple business critical initiatives**, covering solution design, development, production releases and issue resolution. Collaborated with business, operations and external teams to translate requirements into reliable enterprise solutions.

Jio Platforms Limited | Software Development Engineer — Jul 2022 - April 2025

- **Spearheaded the development of Jiostream Studio**, building the platform from the ground up and **successfully migrating** from legacy Admin and Creator portals to a unified, modern system. This included new **end-to-end feature development** such as the Stories feature, widget customisation, and dashboard enhancements, significantly improving functionality and user experience.
- Engineered **configuration driven client portals** where centrally managed layouts, widgets and settings control the user experience; built reusable UI foundations and RBAC-enabled administration workflows for catalogue and content operations.
- **Developed the official team website (stream.jio) from scratch**, collaborating with designers to implement animations and deliver an engaging, user-centric experience.
- Developed and optimised an iOS video SDK using Swift and Objective-C, alongside administration capabilities for content management, moderation and proctoring; improved SDK efficiency through focused refactoring and reduced SDK size by 20%.
- Contributed to **JioGames**, a **multi platform livestreaming** and video on demand SaaS product, delivering viewer, creator and admin experiences across web and mobile.
- **Awarded Most Valued Player** at the **JioMatrix Conference 2023** for my contributions to the JioStream project.

PROJECTS

- **Video Compliance Checker**
  - Agentic video-auditing solution that analyses extracted speech and on-screen text against regulatory documents to flag potential compliance violations, reducing reliance on manual review of lengthy footage.
  - Tech: Azure Video Indexer, LangGraph, OpenAI LLMs & embeddings, Azure AI Search (RAG), LangSmith
- **AI-Powered Meeting Assistant**
  - An application to transcribe the meeting discussions and then provide a concise summary, highlighting the key points and extract key action points
  - Tech: OpenAI Whisper speech recognition, IBM WatsonX, Gradio
- **AI Voice Assistant**
  - LLM powered conversational assistant for day to day tasks/activities.
  - Tech: IBM Watson TTS, IBM Watson STT, Open AI GPT model
- **COVID Tracker | Link**
  - A coronavirus live-stats tracker with a Map, Past-data graph, and Country cases
  - Tech: React JS, Leaflet (Map library), ChartsJS
